

This antibody was developed and validated by the Medical Research Council Protein Phosphorylation and Ubiquitylation Unit (University of Dundee, Dundee, UK).

Background

Protein ubiguitylation and protein phosphorylation are two major post-translational modifications that regulate the functions of proteins in eukaryotic cells. However, these modifications do not operate independently of one another, but are frequently interlinked to enable biological processes to be controlled in a more complex and sophisticated manner. Studying how protein phosphorylation events control the ubiquitin system and how ubiquitylation regulates protein phosphorylation has become a focal point of the study of cell regulation and human disease. Cloning of PTEN Induced putative Kinase 1 (PINK1) was first described by Unoki and Nakamura et al. (2001). PINK1 is a mitochondrial serine/threonine kinase involved in the normal function and integrity of mitochondria, PINK1 reduces neuronal apoptosis through a reduction in cvtochrome c release from mitochondria and subsequent activation of caspase 3 (Petit et al., 2005). PINK1 has been shown to phosphorylate Parkin at Ser65 located in its Ubl domain which leads to a marked activation in the activity of the E3 ligase (Kondapalli et al., 2012). PINK1 activation of Parkin catalyses K63-linked polyubiquitylation and enhances parkinmediated ubiquitin signalling through the I-kappa-B kinase/nuclear factor kappa-B (NF-kappa-B) pathway. It is thought that

PINK1 (human; residues 175 - 250), pAb

Alternate Names: PTEN Induced putative Kinase 1, Park6

Cat. No.	68-0019-100	Quantity:
Lot. No.	30256	Storage:

FOR RESEARCH USE ONLY

CERTIFICATE OF ANALYSIS

Page 1 of 2

NOT FOR USE IN HUMANS

Physical Characteristics

Quantity: 100 µg

Concentration: to be provided on shipping

Source: sheep polyclonal antibody

Immunogen: human PINK1 (residues 175-250) [GST-tagged]

Purification: affinity-purified using immobilized immunogen

Formulation: phosphate-buffered saline

Specificity: detects PINK1 at ~63 kDa

100 µg

-20°C

Reactivity: human

Species cross reactivity: mouse

Stability/Storage: 12 months at -20°C; aliquot as required

Research Applications and Quality Assurance

Western Immunoblotting: Use 1.0 µg/ml Immunoprecipitation: Use 5.0 µg/mg of cell extract

Immunoprecipitation Assay:

HEK293 cells were stimulated at the indicated time points with 10 mM of CCCP. HEK293 whole-cell lysates (1 mg) were immunoprecipitated with anti-PINK1 antibody (Cat# 68-0019-100) or pre-immune IgG covalently coupled to protein G Sepharose and resolved by 8% SDS-PAGE. Immunoblotting was performed with a commercially available anti-PINK1 (full length) antibody.

Background

Continued from page 1

deregulation of this pathway through Parkinson's Disease (PD)-linked mutations in PINK1 is the cause of PD pathogenesis (Sha et al., 2010). PINK1 controls Parkin E3 ligase activity not only by phosphorylating Parkin, but also by phosphorylating ubiquitin - both at Ser65. It is thought that phosphorylation of Parkin serves to prime the E3 ligase enzyme for activation by ubiguitin (pSer65) (Kazlauskaite et al. 2014). USP30 (a deubiquitylase (DUB) localized to mitochondria) antagonizes mitophagy driven by Parkin and PINK1. Parkin ubiguitylates and tags damaged mitochondria for clearance. USP30 removes ubiquitin attached by Parkin onto damaged mitochondria and blocks Parkin's ability to drive mitophagy. Thus USP30 inhibition is potentially beneficial in Parkinson's disease by promoting mitochondrial clearance and guality control (Bingol et al. 2014).

Antibody Production:

Anti-PINK1 (human) polyclonal antibody was raised in sheep against PINK1 (residues 175-250 of human PINK1). The antibodies were purified by the Medical Research Council Protein Phosphorylation and Ubiquitylation Unit (MRC-PPU, University of Dundee, Dundee, U.K.) by affinity purification of the anti-PINK1 pAbs from the sheep serum using an antigenagarose column followed by depletion of any anti-GST pAbs using a GST-agarose column. Anti-PINK1 (human) pAb was sourced by Ubiquigent directly from the MRC-PPU.
